

SOIL VAPOUR SAMPLING TIPS

- Finger tighten tube caps until both nuts stop turning. Wrenches and tools will damage tubes.
- Keep dirt and soil away from the tube. Blockages can occur.
- Keep tubes and pumps **DRY**. Moisture will damage tubes.
- Ice packs and ice are **NOT** required for shipping of samples.
- Keep tubes unobstructed during sampling.
- Pumps have already been calibrated in the lab. Adjusting the regulator screws without a digital rotameter could result in inaccurate sample collection.
- Sampling high volumes at contaminated sites may overload and damage the tube.

Please check the required volumes for your site before sampling.

Equipment Rental Cost

- Pump rentals are on a daily basis. Contact your Account Manager for price details.
- Please note: Tubes that are not returned within 4 months of the rental day will be considered lost. The cost to replace lost, damage or overload tubes is \$120/tube.

If you need to make any changes to your rental order or if you have any sampling questions, please give us a call at (604) 279-1499
